

HR VP™, HR Portal System

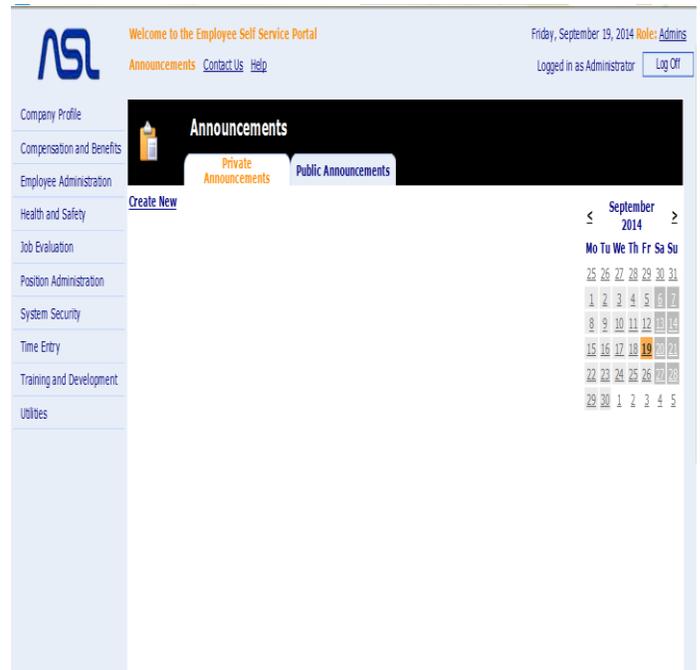

ASL's HR Portal system builds on your investment in ASL HRMS and Self-Service Technologies by allowing users to access and focus on information from these systems in conjunction with complementary products provided by our business alliance partners. Access is facilitated via standard applets to allow organizations to deploy as much functionality and information as required with little or no effort. Using this approach, organizations can migrate their operations to a Web-based environment at the lowest possible cost and in the shortest possible time without the need for expensive Portal Products or software development from external companies.

Web-based Business Processes

Using ASL's Business Process Management, organizations can tie disparate enterprise systems together allowing employees and managers to complete sophisticated business processes without the need to be proficient in any specific system and without the need for costly systems integration projects in the most effective way. By focusing on what's important to them, both employees and managers maximize the return on the investment in Self-Service and dramatically improve productivity. In this way, organizations can Web-enable their business and more easily work with employees, partners, customers and suppliers.

Role-based Operation

Role-based operation allows users to get their job done right and on-time. By not having to sift through unrelated content and data, users directly impact their own performance as well as the company's performance. Leveraging an integrated security environment means that valuable time is not spent on redundant system configuration. As organizations migrate support is not only provided for existing roles but also for new roles and requirements.

Guaranteed Service and Support

Since 1989 our proven track-record for providing powerful HR software and support means you will benefit from our expertise in Information Technology, regulatory compliance, documentation, training and technical support. Personalized assistance is available directly from our highly skilled customer support specialists or by self-service via the Worldwide Web. By using the Worldwide Web users are no longer limited to defined support hours but can download files, receive communication and support themselves in a self-paced format at anytime from anywhere.

Employee Portal Manager	Allow authorized users to post and maintain portal content for employees
Role-based	All users can focus on what is important to their role and responsibilities
Standard Applets	Minimize costs and risks while maximizing usage, efficiency and satisfaction
